Chemical Physics Letters 228 (1994) 713–715

CHEMICAL PHYSICS LETTERS

Instructions to authors

Letters are intended as brief reports of significant, original and timely research results in the field of chemical physics which warrant rapid publication. In considering the suitability of a manuscript for publication, the editors pay particular attention to the originality of the research, the desirability of speedy publication, and the validity of the conclusions.

Submission: Contributions, written in English, should be sent to one of the editors or, preferably, to a member of the advisory editorial board who is familiar with the research reported who will transmit the manuscript with recommendations to the editors. All manuscripts should be submitted in triplicate, of which one is a clear copy with master figures (see below).
The full addresses of the members of the Advisory Editorial Board will be found at the beginning of every volume.

Refereeing: All contributions submitted will be refereed. The editors reserve the right to reject manuscripts and to edit contributions when necessary.

Comments section: The editors welcome comments on Letters published in the Journal or elsewhere. They will be placed in a separate section. Comments will be refereed as usual and treated as normal contributions. All Comments should have an abstract.

Publication speed: The editors and publishers cooperate closely to ensure minimal publication delays. All proof-reading will be done by the publishers and proofs are not sent to the author(s). If the manuscript submitted cannot be processed immediately because scientific revisions are required or because of the author's failure to meet the length and stylistic requirements (see below), the delay thus resulting will be indicated by the addition of the date of receipt of the manuscript *in final form*.

Publication scheme: Chemical Physics Letters will be published weekly.

Page charge and reprints: There is no page charge. Fifty free reprints per contribution will be made available to the author(s). Further reprints may be ordered from the publisher; an order form is sent to contributors upon acceptance of their Letter.

Copyright transfer: Upon acceptance of an article, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Correspondence: All correspondence with the editors or publishers should contain full reference to the paper concerned, i.e. the names of all the authors, the full title, as well as the date of submission. Once the contribution has been accepted for publication, all further correspondence should be sent directly to the publishers and not to the editors (Ms. S.A. Hallink, Editorial Department, Chemistry & Chemical Engineering Department, P.O. Box 330, 1000 AH Amsterdam, The Netherlands; telephone number (020)-5862664 or 31-20-5862664 for in-

ternational access, FAX (020)-5862459 or 31-20-5862459 for international access, telex number 10704 espom nl, electronic mail: X400: C=NL; A=400NET; P=SURF; O=ELSEVIER; S=HALLINK, I=S or RFC822: S.HALLINK@ELSEVIER.NL).

Preparation of manuscripts: The following are the stylistic requirements for an acceptable manuscript.

(1) *Title*: The title should be brief (normally less than 20 words) and yet convey to the informed reader the nature of the contents of the paper.

(2) *Address*: The name(s) of the author(s) and the name and address of the institute where the research work was done should be indicated on the manuscript. The name of the author to whom correspondence is to be addressed should be underlined.

(3) *Abstract*: An abstract of length not to exceed 100 words is required. It should contain the keywords of the paper as well as the essence of the results.

(4) *Length*: Manuscripts should normally not exceed the equivalent of 2500 words including tables, plus references and figure captions, and no more than five figures. They should be typed double-spaced with a wide margin. All pages should be numbered.

(5) *Symbols and Units*: The use of SI units is strongly recommended. Authors will find the "green book" – Quantities, units and symbols in physical chemistry 2nd Ed., prepared by I. Mills, T. Cvitaš, K. Homann, N. Kallay and K. Kuchitsu (Blackwell Scientific Publications, for IUPAC, Oxford, 1993) – a useful guide.

(6) *Figures*: The drawings for the figures should be of high contrast and carefully lettered and submitted on separate sheets. The lettering as well as the essential details should have proportionate dimensions so as to be legible after the usual reduction by the printers (ideal lettering size after reduction of the drawing to one-column width is 1.8 mm). The drawings should preferably be of the same size as the typescript and designed for a reduction factor in print of two or three. Each drawing should have a figure number and a caption; the captions should be collected on a separate sheet. The appropriate place of each figure in the text should be indicated in the margin.

(7) *Colour illustrations*: Colour illustrations can be reproduced at the author's expense. The Editor will decide if the use of colour is essential for the presentation. Colour illustrations should be submitted as original colour photographs, transparencies, or 35 mm slides. Polaroid colour prints are not suitable. Please submit colour photographs and transparencies close to the size expected in publication.

(8) *Formulae*: Displayed formulae should be numbered and typed or clearly and unambiguously written by hand. Symbols requiring bold-face type, like vectors, etc., should be identified properly in the margin of the manuscript. Long equations should be avoided as much as possible by introduction of suitable abbreviations of component expressions. Special attention should be paid to symbols that can easily be misread, such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, $\times$, X, z, Z, p, P, ρ (Greek rho), etc.

(9) *Tables*: Tables should be typed on separate sheets and each table should have a number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.

(10) *References*: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed numerically on a separate sheet at the end of the paper. Multiple references should be avoided, i.e. each paper referred to should be given its own reference number. The total number of references should not exceed 35. The references should be as complete as possible (et al. may be used in the text but not in the references), and presented as follows:

For a book:

A. Messiah, Quantum mechanics, Vol. 2 (North-Holland, Amsterdam, 1970).

For a paper in a journal:

I. Kaplan and J. Jortner, Chem. Phys. 32 (1978) 381.

For a paper in a contributed volume:

G.L. Hofacker, Y. Maréchal and M. Ratner, in: The hydrogen bond, Vol. 1, eds. P. Schuster, G. Zundel and C. Sandorfy (North-Holland, Amsterdam, 1976) p. 295.

For an unpublished paper:

R.L. Swofford, Ph.D. Thesis, University of California, Berkeley (1973) p. 76.

(11) *Footnotes*: Footnotes should normally have no extensive use of mathematical symbols. They should be placed in the text where required and used sparingly.
